## I INTRODUCTION

The Open d20 3.5, Pathfinder (3.5), or D&D 3.5 rulebooks (Players Handbook, Dungeon Masters Guide, etc.) are needed to use Ea d20 (3.5).

What is Eä d20? It is an attempt to modify Dungeons & Dragons (TM) d20 to more closely fit the "feel" of J.R.R. Tolkien's Middle-earth, Arda, Endor, and the entire Universe of his creation in which those lands are set during different "Ages". This is NOT the Eä RPG System itself. That system is undergoing separate development and follows a completely different system in all areas. The Eä d20 RPG is just an attempt at getting a little closer to Tolkien "authenticity" using the existing d20 system, without a completely new system overhaul. Look at the Eä d20 books the same as you would other "Campaign Setting" books such as Robert Jordan's Wheel of Time d20, or The Green Ronin's Thieves' World d20, campaign settings and rules modifiers for example.

Other versions of Eä d20 are now also underway due to repeated requests. The versions currently under development include: D&D 4 as Eä d20 4, D&D/OpenD20 3.5 as Eä d20 3.5 (this version), AD&D 2 as Eä d20 2, and AD&D 1 as Eä d20 1. Pending D&D Next stabilization to also provide Ea d20 for those rules as well.

It is hoped that many Tolkien fans will prefer the original Eä RPG System for role playing in J.R.R. Tolkien's universe, when it is finally available, since the primary goal is to fit Tolkien's world better than any other existing system. But until then, since d20 is the dominant system (much like Microsoft is dominating with it's operating systems and products, so too is Hasbro dominating the role playing gaming world through Wizards of the Coast), the hope is that players will get an incremental step closer to more "Tolkienesque" gaming, while using a game system they and their friends are already familiar and comfortable with.

Magic in Middle-earth is different in many ways than most typical D&D campaigns based on the standard D&D rules. For some great discussions and essays on Magic in Middle-earth, a website dedicated to role playing gaming and Magic in Middle-earth has been setup by the community of Middle-earth Role Playing gamers at <http://www.merp.com>, an entire section of their site is there for handling just this hotly debated topic.

## Eä d20 - Magic in Middle-earth-1 Introduction

You can also read various published articles on the issue at the free online magazine dedicated to Tolkien role-playing gaming, "Other Minds Magazine" at <http://www.omzine.org>

And of course for the latest releases and discussions of the Eä d20 specific game mechanics, swing by the Eä RPG website and post in the forums.

<http://www.earpg.com>

For the purpose of Eä d20, one of the goals is to attempt to minimally change how magic is interpreted with the d20 rules, rather than the complete overhaul recommended by most Tolkien purists.

## 2 MAGIC IN MIDDLE-EARTH OVERVIEW

Magic in Middle-earth is less prevalent than the flashy-fireball-casting-wizard types from typical D&D settings, though it *is* much more present and pervasive than one realizes because it is in a more subtle and "natural" way. The entire Tolkien Universe, Eä ("the world that is") was brought into being through the Song of Creation by Eru Ilúvatar and the lesser deities, the Valar and their less powerful brethren the Maiar. To a lesser impact, but no lesser value, all the Free Peoples of Middle-earth – Men, Dwarves, Elves, Ents, Hobbits, etc. – play an important part in adding the notes, refrains, melodies, and choruses to the Music of the Ainur.

Magic is more dangerous to use in "unnatural" ways than in typical D&D settings, especially in the later ages, not only because of its difficulties, but also because it can be felt by others attuned to magic at great distances. Evil magic corrupts. Minds can be broken, driving a spell caster insane. Powerful magic leaves traces that can be sensed by some, for hours, days, even many years, afterward.

The vast majority of humans and Hobbits in Middle-earth, especially in the Third and Fourth Ages, go through life blissfully unaware of the "magic" that pervades the very fabric of the world, and usually shy away from, or even condemn those that use "obvious" magic.

There is "magic" in the power of words, oaths, curses, and most especially in music and song. This comes very much from the Song of Creation's influence.

## Eä d20 - Magic in Middle-earth Magic in Middle-earth Overview

The terms *sorcery* and *sorcerers* are considered evil in Middle-earth by Tolkien's standards, closer in nature to *necromancy* than *wizardry*. Though many non-magic-users consider all spell casters to be the same; scary, "unnatural", and users thereof to be avoided by a wide berth. Tolkien was a master word smith, and so many words he uses in his works usually have a very concise meaning, and frequently a long history behind it. It depends on the level of "purity" you want to undertake in your Middle-earth campaign whether you will allow the class "Sorcerer" to be a good aligned character or not. For some DM's this is more only a semantics issue than a system issue. It would seem more that *necromantic* types of magic would fit what Tolkien referred to as "sorcery" in the evil sense. So, for most DMs, rather than modifying the Sorcerer class per se, just a name change for good or neutral aligned sorcerer-type casters, maybe just the generic term "Mage" or "Magician", or "Wild Magician" or some other more creative and colorfully apt a name. Then any evil casters would be called "sorcerers" or necromancers.

### ***Quick definitions:***

*Wizard / wizardry*: The use of lore and manipulation of the fabric of Ea to alter materials and events for various uses, but generally meant for neutral or "good" causes.

*Sorcerer / sorcery*: The use of wizardry for generally more selfish and/or destructive actions, even if meant for a "good cause", that can have a negative impact on the world and the lives thereon.

*Necromancer / necromancy*: The use of wizardry to raise the dead, cause death, dying, illness, plague, destruction, and other intentionally "evil" and wantonly destructive acts.

Necromantic "evil" magic taps into the powers of the Shadow from Morgoth/Melkor/Sauron essence and the parts of the Song of Creation "tainted" by Morgoth before his imprisonment.

See the "Spell Tainting" section for information on casting "evil" magic, taint, insanity, and the consequences thereof.

This tome contains a complete abridged spell list from the d20 3.5 Players Handbook, Spell Compendium 3.5, and/or

other supplements (Complete Arcane, Complete Divine, etc), with the modifications of these rules by each spell. These will only be summary lists, all spell details will have to be referenced from the original source books accordingly.

### 3 MAGIC USE FORMULA OVERVIEW

A formula has been developed through extensive play testing with various groups and at conventions to calculate the various challenges and risks for manipulating the Song of Arda through “magic”. There are a number of optional rules available, but the core rule modification is the creation of a DC (Difficulty Check) required to successfully cast a spell without negative consequences.

The basic approach is that each spell has a set DC. The spell caster rolls to verify spell casting success. If caster succeeds, the spell is cast normally (while expending the spell slot or spell points<sup>1</sup>). If the caster fails to meet or exceed the Base Spell Cast DC, then they must roll a Spell Casting Fortitude Check. If they succeed with this second roll, the spell fails (using up the Spell Points), but with no other adverse consequences. If the spell caster fails the Spell Casting Fortitude Check, then they must look at the Spell Casting Failure Results Table to see what additional ill effects befall the spell caster. Finally, the DM rolls a check on the Spell Cast Broadcast, Detection, and Residue to see if those creatures or NPCs that are sensitive to “magic” might have been alerted to the spell caster's use of these powers, which can have a significant storyline impact that is appropriate to a Tolkien game setting.

Though this approach initially adds some complexity for the spell caster (and DM), play testing has shown that after a few uses, both player(s) and DM quickly integrate this into normal game play with minimal impact on game flow. These extra “hoops to jump through” leads to spell casters being far more careful about when they use higher level “magic”, and a better appreciation for the effort it takes and the associated risks. Also noted was an increase in the other non-spell-casters' actual appreciation for the spell caster's abilities, whereas previously they were generally taken for granted. There tends to be considerably less use of visible magic by NPCs and PCs, so that when it is used, it has more of a feeling of something special, rather than routine.

---

<sup>1</sup> While this book generally uses the Spell Points rules from the Unearthed Arcana, you can use most of the rules in this system with the standard spell slots instead of spell points.

### 3.1 BASE SPELL CAST DC

The Spell Casting DC is in addition to the usual Concentration checks when appropriate as per the standard D&D 3.5 rules. No matter what the circumstances are, the spell caster must roll the Spell Cast Check to determine if the spell is cast properly.

Manipulating magic to a desired result is difficult. Thus, checks against difficulty based on the task at hand, versus the abilities and experience of the manipulator, should be made. These rules modifications should more accurately reflect the risks. Only with many years of character development (and levels) do the risks become somewhat mitigated. For all spells a difficulty check (DC) rolls need to be made EVERY time they attempt to “cast” a “spell”.

Below is the formula used for determining the Spell Casting Difficulty Check number:

**BSC DC (Base Spell Cast Difficulty Check )= (10 + (3 X Spell Level ) )**

Examples:

1<sup>st</sup> Level Base Spell Cast DC = 13

9<sup>th</sup> level Base Spell Cast DC = 37

Cantrips are automatically assigned a DC value of 2. The spell caster just needs to *not* roll a 1 and all is well when casting cantrips.

### 3.2 SPELL CAST ROLL

Below is the formula for actually casting a spell to see if it succeeds in casting by exceeding the Base Spell Cast DC:

**Spell Cast Roll = d20 roll + spell caster level + Racial Modifier<sup>1</sup> + Casting Attribute Bonus (INT, WIS, etc) Modifier + any other modifiers.**

*Example:*

*A 4<sup>th</sup> level spell (Base Spell Cast DC=22) cast by a 7<sup>th</sup> level caster (+7 to spell cast roll), with 18 INT (+4 to spell cast roll), Noldor Elf Racial Modifier (+3), rolls a 12. Adding up all the bonuses the total result is 26, sufficient to successfully cast the spell without any undesired consequences (besides the usual broadcast and residue risks).*

---

<sup>1</sup> Spell Cast Racial Modifier values are found in the Ea d20 Races & Cultures Book

### 3.3 FAILED SPELL CAST

If a spell caster fails their Spell Cast Roll, then they need to make their Spell Casting Fortitude Difficulty Check roll. This formula is determined here:

**Spell Casting Fortitude DC = Base Spell Cast DC**

**Spell Casting Fortitude Roll =  
d20 roll + spell caster level + spell caster's Fortitude Modifier**

Thus, a first level spell has a Base DC of 13. A first level caster, without any Fortitude bonuses, would need to roll a 12 (1<sup>st</sup> level provides a +1 bonus to the roll) or higher on a d20 to succeed in casting the spell.

If you do not wish to calculate every DC, a handy table has been provided titled the *Base DC Chart* for a listing of BASE DC ratings modified by level bonuses for every caster level up to 30<sup>th</sup> level, and all spell levels up to level 9.

If a spell caster fails the Spell Casting DC check, but succeeds with their Fortitude check, they only lose the spell and related spell points. However, if they fail their (second roll) Fortitude check as well, then they must consult the consequences listed in the "Spellcasting Failure Results" table.

### 3.4 SPELL CASTING FAILURE RESULTS

The Spellcasting Failure Table "DC missed by" is determined by simply calculating the difference between what was needed to succeed, versus the total actually rolled for the Spell Casting Fortitude Roll. Note that the penalties listed are *cumulative*.

Example:

If a 7<sup>th</sup> (+7) spell caster attempting to cast a 4<sup>th</sup> level spell (Base DC 22), rolled a 3 on the Spell Cast Roll, the spell caster failed to cast the spell. Then the caster rolled the Spell Cast Fortitude Check, with only a 5 plus the Fortitude bonus (+2) and the spell caster level bonus (+7) for a total of 14, the spell caster would fail the Fortitude Check by  $22 - 14 = 8$ . This would indicate that the second row of consequences from the Spell Casting Failure Results Table would be applied.

## Eä d20 - Magic in Middle-earth Magic Use Formula Overview

<b><i>Spell Casting Failure Results Table</i></b>	
<b>DC missed by</b>	<b>Result</b>
1 – 5	The spell caster suffers a headache and fatigue. As a result, the spell caster suffers a -2 penalty on all attribute and skill checks, attack rolls, and saves. The spell caster recovers from these penalties when able to rest for at least eight hours awake rest, or 4 hours sleeping rest. If this was a failed cantrip, change the penalties to be only -1.
6 – 9	The spell caster suffers a significant headache and fatigue resulting in a -4 penalty on all attribute rolls and a -2 penalty on all skill, attack rolls, and saves. The spell caster is also stunned by the sudden searing pain and cannot take <i>any</i> action for 1 round (even defensive). The caster also takes 1 point of damage and cannot cast any spells for 1d4+1 round(s). If the hit points of damage would put the character lower than zero hit points, then the character is only at zero hit points.
10 – 13	The spell caster suffers a severe headache and fatigue resulting in a -6 penalty on all attribute checks, with an additional -4 to all skills, attack rolls, and saves. The spell caster is in agony, dazed, confused, and cannot take any action for 2d6+4 rounds. The caster also takes 1d6+1 points of damage and cannot cast any more spells at all for 1d6 hour(s). If the character drops below zero HP, the PC is “dying”, lapses into unconsciousness and must make the usual stabilization checks to avoid death.
14– 16	The spell caster suffers a horrific headache and crushing fatigue, resulting in a -8 penalty on all attribute checks and -6 to all skill, attack rolls, and saving throws. The caster collapses to the ground, is (barely) conscious (unless drops below 0 HP) but stunned, disoriented and cannot move, speak, or take any other action for 1 full minute. The caster also receives 3d6 points of damage and cannot cast any spells for 1d20 hours (even with rest or sleep). This damage could be fatal if the character drops below zero hit points from this damage, unless the character becomes “stabilized”.
17 – 20	The spell caster suffers an agonizing headache and debilitating fatigue resulting in -10 on all attribute, skill, attack, or saving throw rolls. The caster collapses, lapsing immediately into complete unconscious for 1d20+4 hours. Even if the caster is fully healed, the caster will not come out of this unconsciousness until the determined time has lapsed. The caster also takes 4d6 points of damage. The spell caster is unable to cast any spells for 24 hours after regaining consciousness, and all attempts to cast spells after that time suffer a -24 penalty for the first week after regaining consciousness. This penalty is reduced by 6 each subsequent week thereafter.
21+	The spell caster suffers excruciating agony from head to toe and the most horrific headache the caster has ever experienced. The caster collapses and lapses into a coma for 1d20 days. When the caster comes out of the coma, the spell caster is still completely exhausted and initially suffers a -8 check to all actions, attributes, and saves. The caster also takes 5d6 points of damage, and cannot cast any spells for 1d6 month(s) after regaining consciousness. This damage could be fatal if the character drops below zero hit points, unless the character becomes “stabilized”.

### 3.5 FUMBLES AND CRITICAL SUCCESS (*OPTIONAL*)

A natural 20 roll = critical success, and typically doubles all the effects of the spell (duration, damage, range, etc.) see spell descriptions in the appropriate handbook for detailed benefits and also refer to Spell Critical Success Table.

A natural 1 roll = fumbled, spell fails to cast and/or backfires, spell points/slot lost, refer to the Spell Casting Failure table.

### 3.6 SPELL CAST ROLL, CRITICAL SUCCESS (*OPTIONAL*)

If a spell caster rolls a natural 20 when casting a spell (all spell levels except cantrips/zero level spells), then the caster did astoundingly well and manages to greatly increase the normal benefits of the spell cast. The spell caster makes a second d20 roll and consults the *Spell Casting Critical Success Table*.

<i><b>Spell Casting Critical Success Table<sup>1</sup></b></i>	
<b>D20 roll</b>	<b>Result</b>
1 – 11	The spell caster uses one SP (or one spell level slot <sup>2</sup> ) less than the spell normally requires (for 1 <sup>st</sup> level, no SP used)
12 – 14	The spell caster only uses one half of the SP normally required for the spell (for 1 <sup>st</sup> and 2 <sup>nd</sup> level spells, no SP used). <sup>3</sup>
15 – 17	The spell effect is as though 1 level higher than normal for all variables, before the doubling effect is applied.
18 – 19	The spell spell effect is as though 2 levels higher than normal for all variables, before the doubling effect is applied.
20 (natural)	The spell effect is as though 3 levels higher than normal for the caster for all variables, before the doubling effect is applied.

1 All of these results are *in addition* to the doubling effect bonus.

2 With spell slots for example, if the spell was using up a 5<sup>th</sup> level spell slot, it would instead only use up a 4<sup>th</sup> level spell slot if still available. If no 4<sup>th</sup> level slots were left, then this benefit would not be realized.

3 With spell slots, the caster would use a slot at half the level of the spell. For example, if casting a 4<sup>th</sup> level spell, the caster would only use up a 2<sup>nd</sup> level slot (if available). If there were not any 2<sup>nd</sup> level slots available, then it would be the next level up, 3<sup>rd</sup> level, instead. If that was also not available, then this benefit would not be realized. If the caster was only able to cast 1<sup>st</sup> level spells, then the caster would not realize this benefit.

## Eä d20 - Magic in Middle-earth Magic Use Formula Overview

### 3.7 BASE DC CHART

*Base DC Chart 1*

*Table 1: Spell Cast DC vs. Level Table*

## 4 SPELL POINTS (RECOMMENDED)

One of the more significant changes to the spell casting rules to be more Tolkienesque, besides adding DC's to casting is the recommended use of Spell Points for ALL spell casters. This is to help more closely fit a number of descriptions of spell caster use in the various Tolkien works, to more closely relate spell caster weariness to the tasks undertaken. However, this system can still be used by spell casters that use spell slots instead of spell points, it will just tend to be less granular than using spell points.

**Spell Points required for casting = Spell Level.**

(e.g. 1<sup>st</sup> level spell = 1 Spell Point, 2<sup>nd</sup> level spell = 2 Spell Points, etc.)

Page 153 of the D&D 3.5 Unearthed Arcana rulebook, provides details and options for using a Spell Points system for casting by all spell casting classes. See that book for all the details.

## Eä d20 - Magic in Middle-earth Spell Points (Recommended)

Just the tables relevant to base Spell Points have been replicated here for quick reference.

<i>Spell Points Per Day Table</i>

---

<sup>1</sup>Use Bard chart for the following classes: Bard, ...

<sup>2</sup>Use Cleric, Druid, Wizard column for the following classes: Cleric, Druid, Wizard, ...

<sup>3</sup>Use Paladin, Ranger column for following classes: Paladin, Ranger, ...

<sup>4</sup>Use Sorcerer column for the following classes: Sorcerer, Beguiler, ...

#### 4.1 SPELL POINTS AND FATIGUE (RECOMMENDED)

With this recommended optional rule, spell casters must make fatigue checks when casting while Spell points are at or below 25% of total SP but greater than 10% of total possible SP's. An additional check when SP's fall at or below 10% total possible SP is also required. This means, that whether they succeed or not on their Spell Cast DC, they have to make a Spell Failure check based on Fortitude, to see if they become fatigued or exhausted. This check does *not* require consulting the Spell Casting Failure Results Table.

If the character fails, and was not already fatigued, then the character becomes "Fatigued" as per the rules in D&D P.H. 3.5 page 308: "... -2 *penalty to STR & DEX...*" . If the character is already fatigued and fails this check, then the character becomes exhausted as per the rules in D&D P.H. 3.5 page 308: "... -6 *penalty to STR & DEX...*".

##### 4.1.1 EXHAUSTION FOR ALL ATTRIBUTES (OPTIONAL)

*Optional Rule for "more realistic fatigue effects":* It would seem to some DMs, that fatigue affects all stats, not just STR & DEX. When you are tired, do you not make poorer decisions? Thus Wisdom should be impacted. When you are fatigued do you not have difficulty with memory, recall, analysis, and logical thought process? Thus Intelligence should be impacted. When you're tired, don't you tend to be a little more grouchy and snappish, or less patient, or maybe a little less "on your game" during speeches and leadership situations? Thus Charisma should be impacted.

So, with those assumptions, a failed Fatigue Check causes the spell caster to be fatigued at -2 on all attributes (instead of just STR & DEX). If already fatigued, either by magic or as per fatigue rules in PH 3.5, or the preceding rule, the spell caster becomes exhausted and is at -6 to all attributes and can not cast any more spells until recovered as per PH 3.5 Exhaustion and Fatigue rules on page 308.

#### 4.2 SPELL POINTS "OVERUSE" (RECOMMENDED)

Some spell casters, most notably Elves, will likely be tempted to "overuse" the spell points option in a given day. For example, since an Elf only needs 2-4 hours of meditation to be fully rested and "recharged", they may rest from 2 am to 6 am. Go adventuring, sling a lot of spells, exhaust their spell points, then by 8 am ask the party to take a 4 hour break while the caster rests again to "recharge" before going on to the next encounter. Assuming the other

## Eä d20 - Magic in Middle-earth Spell Points (Recommended)

players don't mind the slow-down, in preference for having their spell caster ready and raring to go, the caster could potentially play the system this way 6 times a day!

Even "normal" spell casters needing 8 hours of sleep could do this 2-3 times in a day. Giving them effectively 200%-300% more SPs (Spell Points) in a 24 hour period than normal!

If you are dealing with min-max players that prefer to manipulate the rules, rather than follow the setting and story line, where this seems to be an issue, then the following rule can be applied to increase the risks and likelihood of exhaustion when casting more than 100% of their daily SP.

For every 10% over the spell caster's "normal" Spell Points allotment in a 24 hour period, add +4 to the Spell Casting DC.

Thus:

0-100% SP in a 24 hour/day period = +0 to spell cast DC

101-110% SP = +4 to spell cast DC

111-120% SP = +8 to spell cast DC

121-130% SP = +12 to spell cast DC

131-140% SP = +16 to spell cast DC

141-150% SP = +20 to spell cast DC

etc.

So, a 1st level caster with 6 SP, casts enough spells to use up all 6. The caster then rests a second time within the 24 hours from the first rest period ending, and wants to cast 3 more spells. The first spell puts him at 1 SP overage, so in the 101-110% range that increases base DC of any further spells cast.

Example: The 1st level caster, casting a 1st level spell has a DC before "overuse of SP" of DC 13. Adding the "over casting" penalty of +4 to the DC increases the 13 to a 17. Not impossible, but certainly riskier, the likelihood for fatigue, exhaustion, or worse, increase appropriately, while still providing the caster an opportunity to step up in a real pinch, while at the same time dissuading the caster from overtly "abusing" the Spell Points rules.

### 4.3 “OVERCASTING” (OPTIONAL)

There might be times that a spell caster comes across a spell, scroll, or other opportunity to cast magic far beyond their normal abilities for their level. In most cases this is addressed by the item being used. However, what if a spell caster, in a real pinch, knowing in advance they are going up against something that they otherwise could not take on, knows of a spell, that if the caster were higher level, could make all the difference to the outcome of the quest/battle?

Here are two possible options for DMs willing to let their PC's take on this dangerous opportunity.

#### 4.3.1 OVERCASTING THROUGH RITUAL & COOPERATIVE CASTING (OPTIONAL)

The Thieves' World Player's Manual d20 book by Green Ronin outlines options for Performing Rituals and Cooperative Casting beginning on page 140, this is a possible option some DM's may want to consider, and fits well within descriptions of “magic” in J.R.R. Tolkien's lendarium.

#### 4.3.2 OVERCASTING WITH SPELL POINTS (OPTIONAL)

This option should be heavily weighed by the DM before allowing PC's to use this rule variant. If you have mature, non-min-max, players that “get it” about the story being more important than trying to manipulate the game system, then this may be another option to consider in rare situations where the PC wants to put their life on the line for the sake of the story. This provides an opportunity for “David versus Goliath” for spell casters.

Given enough time to prepare in advance through research in ancient sources, the character may be allowed to cast a spell normally far above their abilities, but at great risk.

Spell Point Overcasting allows for casting of spells that are much higher level than normally allowed for the PC. Do not confuse this with the Overuse of spell points in a given day, as addressed earlier.

If the PC is normally only able to cast first through third level spells, but getting access to a fifth level spell would make all the difference for the

## Eä d20 - Magic in Middle-earth Spell Points (Recommended)

story. And if the PC has the sufficient time and resources available for the research and preparation. Then the PC has a *chance* to learn and prepare ONE spell, though at great personal risk and cost, above the caster's normal abilities.

The difficulty and risk in this process is based on how many additional levels the PC would need to have in order to cast at that spell level.

### Example

A 4<sup>th</sup> level bard can cast up to 3<sup>rd</sup> level spells. This PC wants to cast a 5<sup>th</sup> level spell, but cannot do so until 13<sup>th</sup> level. This is a level difference of 9.

### 4.3.2.1 STEP 1 – FIND A RESOURCE

The chance of finding a resource that this PC can find to achieve this goal first has to be determined. This is calculated first by determining the Base Spell Cast DC, and then adding location modifiers, for a total Find Resource DC.

**Find Resource DC = Base Spell Cast DC + Location Mod + Alignment mod**

Modified by location means determining whether they are near more rural versus urban resources. Modified by alignment modification means in relation to the spell.

#### Location Modification Chart:

Very rural:	+8 to DC
Semi-Rural:	+6 to DC
Small Urban:	+4 to DC
Large Urban:	+2 to DC
Capital City:	0

Location Alignment, use the same location alignment modifiers as indicated for spell broadcast and residue, and add to this DC for finding the resources needed.

Once the total resource DC is determined, the PC rolls adding the PC's spell caster level bonus (+1 per level, in this example a total bonus of +4). If successful, the PC finds a resource (DM's discretion on the details, this can make for some interesting plot hooks and story telling) that will meet the initial possibility of researching this spell.

## Eä d20 - Magic in Middle-earth-4 Spell Points (Recommended)

### 4.3.2.2 STEP 2 – RESEARCH & RETAIN

Now the PC has to attempt the actual research itself, and be able to retain that knowledge in a useful way.

This DC is the same as the spell casting DC (remember it is going to be high since it is so much higher than the PC's level).

If the PC succeeds, then the PC successfully learns and retains the information for X number of days. The number of days for memory retention is equal to their INT modifier (or other primary spell casting attribute, WIS for Divine, etc.). With a +4 INT modifier, the PC would retain the information for 4 days.

#### 4.3.2.2.1 GRADUALLY FADING MEMORY (OPTIONAL)

Instead of an “all or nothing” approach to memory loss, this option takes a little more gradual approach. For each day after the first, the spell casting DC will increase by +4. After the (in this case fourth) last day of retention, the PC can no longer cast the spell.

Example:

PC Wizard has an 18 INT for a +4 modifier. The PC successfully researches and retains the spell. During that first day, there is no penalty. On the second day, the spell casting DC has increased by 4. The third day the spell casting DC has increased by 4 from the original DC. The fourth day the DC is increased by 12. By the fifth day, the PC has lost enough of the memory, that it will no longer be possible to cast the spell, even with a “natural 20”.

### 4.3.2.3 STEP 3 – ATTEMPTING THE OVERCAST

Finally the PC is now ready to actually attempt the spell overcast. The number of spell points the PC will need in order to follow through with the overcast will be considerably higher than it would be if the PC was at the correct level.

The Required Spell Points for Overcasting are determined by:  
**Original SP requirement + Spell Level differential.**

**Spell Level Differential = Spell Caster Minimum Level Requirement To Cast The Spell - Spell Caster Current Level.**

## Eä d20 - Magic in Middle-earth Spell Points (Recommended)

The PC will want to be fully rested, otherwise additional penalties (as listed already in other sections) will make this attempt even more dangerous. The PC must have enough total spell points to cover the “cost” of casting the spell.

The original SP requirement is determined as normal by the actual spell's level. In this example, 5. The spell level differential is the difference between the casters current level and the level normally needed to cast, in this case, 9. So the spell caster would need 14 spell points in order to even have the chance of attempting to cast this 5<sup>th</sup> level spell.

Finally, the spell cast DC is considerably higher than normal in overcasting situations. The DC for overcasting in this case is based on the normal DC formula, plus the spell level differential.

So the normal base DC for casting a 5<sup>th</sup> level spell is 25. In this example the DC for the PC would be 34!

Of course, a “natural 20” would also count as a success (and maybe the PC's only chance).

If the PC fails, the roll on the dangers chart will be this full modified DC of 34, not the base DC of 25, so the risk of brain aneurism and other dangers will be very high.

### Example:

The aforementioned 4<sup>th</sup> level bard (spell caster level bonus +4) wishes to cast the 5<sup>th</sup> level spell, this would normally have a Base Spell Cast DC of 25. The PC would normally need to be 13<sup>th</sup> level to cast the spell, thus a Spell Level Differential of 9. The PC is in the large urban setting of Pelargir, though not a capital city, since it is a large city (large urban), it only adds a +2 penalty to the Find Resource DC (traveling to Minas Tirith would make this zero). This is a Good Aligned spell and location at this time, so the PC has no additional penalty to the Find Resource DC. This means the total Find Resource DC would be 27. Short of a natural 20, this might be impossible for the PC to find in Pelargir, so after failing the roll, the DM might suggest the PC found hints that there might be a resource in Minas Tirith (though once arriving in Minas Tirith, the PC would have to roll again, but this time at “only” a Find Resource DC of 25).

Spell Level Differential = 9

Location Mod = +2

Alignment Mod = 0

Total Find Resource DC = 27.

## 5 SPELLCASTING BROADCAST & RESIDUE

Another aspect of "magic" that is very Tolkienesque is the fear that using "magic" might "alert the enemy" as to the caster's whereabouts. So this requires a game mechanic that illustrates spell casting "broadcast", "residue", and "detection".

Spell "broadcasting" can be thought of as a type of beacon or spot light that is beamed up into the sky, or noise, or vibration, the can be "felt" or "seen" only by those more "sensitive" to "magic". After the initial casting of the spell (and "broadcasting"), the area around the spell caster and the spell's effects, leave a "residue" that also can be detected by those appropriately sensitive. This residue can linger for minutes, hours, days, weeks, months, years, or in the case of the most powerful "magic" can leave residue spanning aeons.

The strength of the broadcast and residue is also more noticeable in locations that are at odds with the type of magic used. For example an evil necromancer casting "evil magic" in Dol Guldur or Mordor would be relatively unnoticed, but a "good spell" cast in that same location would send out many alarms. The same applies in reverse situations. Some one casting dark magic in Rivendell would be very much notices, whereas the works of creation by the Elves in Rivendell would be part of the normal "feel" to the location.

**Spell Broadcasting Base Points = Spell Level multiplied by  
Location Alignment Table**

**Spell Residue Base Points = Spell Broadcasting Base Points**  
(initially residue and broadcast have the same values but this "fades" over time  
as indicated in the Spell Residue Fading table)

Besides the risks of failure and personal or localized injury or damage, another risk of using magic (and the more powerful the magic, the greater the risks), is the impact manipulating the fabric of the universe has in announcing to those sensitive to such things, "broadcasting" the use of magic, and the left over "residue" after effects of such magic.

## 5.1 METAMAGIC ABILITIES

Use of magic-like metamagic abilities that replicate spells without casting an actual spell can have the same broadcast and residue effects if the ability causes any changes in the Song of Arda. A detection-type metamagic ability would NOT cause broadcast or residue, while a creation or alteration type would cause broadcast and residue.

## 5.2 BROADCASTING

Some spells can “broadcast” that magic is being used to other parties sensitive to sensing such changes in the Song of Arda. For example using some types of magic when the Nazgul are near, is likely to draw their attention. Spell “alignment” and location alignment affects how much a spell broadcasts, as well as the spell level.

Neutral spells have a broadcast level equal to the level of the spell being cast.

The distance of broadcast is equal to a number of miles equal to the spell broadcast level, multiplied by 10 in same-alignment locations, and by 100 when in opposite aligned locations.

Evil Spells have a broadcast level equaling from 2 to 10 times the spell level depending on the location severity of the “evilness” of the spell. If in a neutral area, the broadcast is three-fold. If in an evil area, it is only the standard amount (typically equal to the spell level). This is because evil magic is meant in spite of the Song of Creation (though of course it is always able to eventually weave any such discord into what is on the whole a more beautiful song than would have been otherwise), and so all evil magic leaves a stronger residue and broadcast than neutral and good magic, even in an evil place. Also since evil magic is linked to Melkor/Morgoth those creatures are more sensitive to each other's magic. Sauron will certainly notice even an evil spell if cast in Mordor. If in a blessed/holy/good place, it is at least 10 times the spell level and can be higher based on DMs judgment.

Good spells only broadcast 2x the spell level in neutral areas. This is based on the idea that the “Song of Creation” is basically “Good” and so good spells don't stand out as much from the “Background noise” of the Song of Creation, as much as evil spells do (See exceptions in evil locations). Good spells in a good location only broadcast at normal spell level. Good spells cast in

## Eä d20 - Magic in Middle-earth-5 Spellcasting Broadcast & Residue

an evil location broadcast at 10 times (or more depending on GM's judgement) the spell's level. This is because it stands out so strongly in opposition to the evil location in contrast.

**Spell Broadcasting Level = Spell Level \* (Location Alignment Chart)**

### 5.2.1 SPELL BROADCAST RANGE

The area of "broadcast" range for a cast spell is typically determined with the following formula:

**(Spell level + Spell caster level) \* Location Alignment Modifier.**

If outdoors in a rural setting, this number is equal to miles. If outdoors in a large urban setting, this range is typically divided by 10.

If underground, this range number is multiplied by 10 feet instead of miles.

A spot check for broadcast (as listed on the character sheet) for some races and classes, will indicate roughly if the opposite aligned magic has occurred and roughly the direction or distance.

### 5.2.2 SPELL CASTER LEVEL (OPTIONAL)

A quick and easy optional means that some DM's may prefer to use, is simply basing the broadcast points on the level of the spell caster. If the caster is 12<sup>th</sup> level, whether they cast a 1<sup>st</sup> level spell, or a 4<sup>th</sup> level spell, the broadcast base number will be 12, then multiplied by the location alignment if needed.

### 5.2.3 Sense Magic Broadcast

If the player character does not have any magic-related abilities, and they do not have a sense broadcast bonus, then the PC has no ability to sense magic broadcast.

If the PC has at least one level in a spell-casting class and/or is of a race/culture that lists a sense magic broadcast bonus, then the PC's ability to

## Eä d20 - Magic in Middle-earth Spellcasting Broadcast & Residue

sense broadcast is based on the following formula:

**Sense Magic Broadcast DC = Base Broadcast DC - Spell Caster Class Level - Race/Culture Modifier.**

*Example:*

*In a neutrally aligned location, a 9<sup>th</sup> level Wizard casts the (5<sup>th</sup> level) Bigby's Interposing Hand. This has a Spell Broadcast Level of 5 causing a base broadcast DC of 15, and a broadcast range of 14 miles (1 mile \* (spell level + level of spell caster)). If this was a good spell cast in an evil location, it would be 500 miles or more!*

*Another character/NPC, and Elf (sensitive to magic) is about a mile away, this character/NPC will be asked by the DM to roll a d20 and add their racial detect magic bonus (1) plus their spell caster level (3).*

*With the character's modifiers, the DC would be the Base broadcast DC (15), minus the character's racial modifier (1), minus the character's spell caster level (3) , for a total modified DC of  $15 - 1 - 3 = 11$ . If the PC rolls 11 or higher*

Probably the more standard explanation would be:

Base Broadcast DC = 15.

PC rolls d20 and adds racial +1 and spell caster level (+3) for a total roll bonus of +4, and just needs to have a total roll plus bonuses the equals or exceeds 15.

### 5.3 MAGIC RESIDUE

Magic residue is the lingering effect after a magic of power has been used, detectable even hours, days, months, years, centuries, or even eons later.

While broadcast can be picked up many miles away during the actual casting of the spell, and duration of the spell effects, once the spell is terminated, the actual area affected by the spell has a lingering residue detectable by those sensitive to these effects. If the spell was cast on an item, creature, or individual, then the residue remains both on that item/person, and at the location where this spell was cast on that item/location (10' area detectable).

The residue strength is calculated by the broadcast points accumulated in an area, and then slowly subtracting based on the following:

**Number of Days of Full Residue Before Fade = Spell Broadcast Level + Spell Caster Level + Location Alignment Modifier.**

**Current Residue Level = Residue Base Level / Time (number of days).**

Using the same earlier example for Broadcasting, the 5<sup>th</sup> level spell in a neutrally aligned location, cast by the 9<sup>th</sup> level Wizard, has a Residue Base Level of 15. The spell was cast

The Time variable is also modified by alignment location. In a neutrally aligned location, this variable is typically 4 days.  
Example:

This spell residue will not begin to fade during the first (15 + 9 = 24) 24 days. After the 24<sup>th</sup> day, the residue will become increasingly difficult to detect with each passing month.

Residue Base Level = 15.

Time since spell effects ended = 4 days.

Current Residue Level = 15 / 4 =

The base DC for detection is 20 – Full residue days ..... ??? Too tired now, 3:30 am, need to go to bed and finish this when rested.

Needs to become increasingly difficult DC to detect the residue over time....

## 5.4 RESIDUE FADING &amp; BROADCAST RANGE BY LOCATION ALIGNMENT

<u><i>Spell Broadcast / Residue fading versus location table</i></u>					
<b>Spell Alignment</b>	<b>Location Alignment</b>	<b>Residue loss rate</b>	<b>Relationship Modifier to Spell Cast success rolls</b>	<b><u>Detection Roll</u> Modifier</b>	<b><u>Broadcast Range</u> Multiplier</b>
Neutral spell	Neutral location	Add +4 to DC per day.	0	0	-
Neutral spell	Good location	Add +2 to DC per day.	0	+2	2
Neutral spell	Evil location	Add +2 to DC per day.	0	+2	4
Good spell	Neutral location	Add +1 to DC per day.	+1	+2	2
Good spell	Good location	Add +4 to DC per day.	+2	0	0
Good spell	Evil location	Add +1 to DC per week.	-4	+8	10
Evil spell	Neutral location	Add +2 to DC per week.	-1	+4	4
Evil spell	Good location	Add +1 to DC per week.	-4	+8	10
Evil spell	Evil location	Add +4 to DC per day.	+4	0	0

In addition to innate abilities of Elves and other cultures and creatures, spell residue can be detected by Detect Magic and similar spells. Spell broadcasts can also be detected by Detect Magic and similar spells if cast during the same time that a spell is being cast or the spell effects are still in effect. Also if the spell is strongly opposite in alignment to the location alignment, it can be sensed more readily by some creatures and individuals. For example the Nazgul, Maiar, and Elves have a strong sense of “magic”, especially when in opposite alignment.

### 5.4.1 SENSE MAGIC RESIDUE

If the player character does not have any magic-related abilities, and they do not have a sense magic residue or broadcast bonus, then the PC has no ability to sense magic broadcast or residue.

If the PC has at least one level in a spell-casting class and/or is of a race/culture that lists a sense magic residue or broadcast bonus, then the PC's ability to sense residue or broadcast is based on the following formula:

**Sense Magic Residue = 10 + Spell Caster Class Level + Race/Culture Modifier – Residue Base Points.**

## 6 SPELL ALIGNMENT, SHADOW, & TAIN RISKS

See UA 3.0 Pages 189-190 for explanation of taint, points, cleansing, and effects.

**Spell Taint Points = 1d3 x Spell Level**  
(for any “evil” type spells – see charts)

Any more Tolkienesque modifications to make here? At least a brief summary should be provided here just to give some idea of how to use it.

I am thinking about having separate effects between “Shadow” versus “Taint”, but not sure yet.

## 7 SANITY & SPELLCASTING RISKS

Sanity see UA 3.0 pages 194-210

Sanity Check = Yes (see relevant charts)

Sanity Points Lost for failed Sanity Check = See chart ~~1d6-1 x Spell Level (see charts)~~

Also put a brief summary on how it works here as well.

## 8 “NATURAL” MAGIC

Tolkien had a strong appreciation of, and respect for nature. His works are constantly imbued with this perspective, and strongly so by giving “awareness” and “power” to nature. Using song, music, dance, and natural items, in special locations are shown throughout his works. Much of nature is “intelligent”, “aware”, and in some cases even mobile (e.g. Ents).

Magic that uses or manipulates nature in generally non-destructive (to nature) ways, for those that specialize in it's use (such as Druids, Rangers, etc.), has to be used in a very responsible way and strong consideration for the possible impacts on nature.

If the spell chart lists this spell as Nature magic, listed as “N” to indicate magic type as “nature”, even if the D&D type is Divine or Arcane, and it is a spell that works *with* nature, not against it. These spells tend to cause less disturbance to the Song of Arda, so it tends to cause little or no broadcast or residue compared to others spells of the same strength.

## 9 SONG, MUSIC, AND THE SONG OF CREATION

Song is powerful as well, so Bards have a very special, and more powerful role than they might in your typical non-Middle-earth D&D campaign.  
More information coming to this section soon....

## 10 THE POWER OF WORDS & CURSES

Words, names, and curses have power in Tolkien's Arda.....

.....

.....

## 11 THE "FADING" OF POWER THROUGHOUT THE AGES

### 11.1 OVERVIEW

Magic in the earliest years of creation was very powerful and wielded readily by those who were around then, initially just Valar, Maiar, and their ilk. Then the Firstborn Eldar (Elves) came, and then too "magic" and the greatest works ever known were made and wielded. As the Ages of passed, the "days of past glory" faded as did the ease of tapping into the various approaches for using "magic", and this shows in increasing difficulties levels.

This system is assuming that the level of magic available for PC's and NPC's was at the "average" level listed in the D&D books throughout the Third Age. Prior to the Third Age, there was a lot more magic-like essence readily accessible, and after the Third Age, this became increasingly difficult to access. So, spell casters in the Second Age, might actually have some bonuses to lower the DC for casting, while in the Fourth Age, the DC's may be higher.

### 11.2 MODIFIERS FOR THE AGES (OPTIONAL)

All of the information listed thus far listed is for campaigns based around Third Age campaigns, mostly the latter half of the Third Age. Some GMs may wish to reflect the change in "power levels" of the past with the following suggested modifiers.

<pending>

### 11.3 FIRST AGE

The Song of Arda is still newly forming the universe and the world, and is readily accessible for those wishing to join in the chorus. This means it is significantly easier to cast more powerful magic than in later Ages.

During the First Age, a spell caster receives a +4 bonus to their DC roll for spell casting.

### 11.4 SECOND AGE – TWO HALVES?

During the Second Age, *prior* to The Fall of Numenor, this is considered the "average" time period for magic listed in the D&D books. There is no modifier to the DC roll for spell casters during this Age.

During the Second Age, *after* "The Fall" all spell casters have a -1 penalty to their DC roll for spell casting.

### 11.5 THIRD AGE

Spell casters in the Third Age, have a -2 penalty to their DC spell cast roll during the Third Age.

## Eä d20 - Magic in Middle-earth The "Fading" of Power Throughout the Ages

Things are increasingly "fading", and accessing the Song of Arda is becoming more difficult. The Deities have separated themselves from the world, and the approach of the Age of Men is having increasing impacts.

### 11.6 FOURTH AGE

Spell casters receive a -4 penalty to their DC spell cast roll during the Fourth Age.

The Elves have all but left Middle-earth. The Song of Arda is very difficult to tap into except for a rare gifted few.

### 11.7 LATER AGES

Each subsequent age, the DC penalty increases another -4 (cuulative, so the 5<sup>th</sup> age would be -8) to the spell casters roll for casting a spell.

## 12 PSIONICS (MENTAL ABILITIES)

There are many examples in Tolkien's works of "Psionic Ablities". These include such abilities as "Telepathy", "Prescience", "Clairvoyance", "Clair-audience", etc.

These appear to be distinct from "magic". For example, Sauron's srying via the Orb of Orthanc, or Galadriel's Mirror, using "magic items" may be different from Malbeth The Seer's innate prescience abilities?

Here are some examples from Tolkien's works....

Eä d20 - Magic in Middle-earth-12 Psionics (mental abilities)

More details on this area are pending...

## 13 SPELL USE EXAMPLES IN ACTION

The spells in this document are formatted to fit the OpenD20 and D&D description formats as closely as possible, though some fields are added specific to spell casting in Middle-earth. See the Spell Castin Table for details on those added fields.

Example 1:

Blathor a 1<sup>st</sup> level Wizard, during the Second Age prior to The Fall of Numenor, and with +1 Fortitude Save Bonus, and no racial bonuses to casting DC, casts the 1<sup>st</sup> level Arcane Spell, Magic Missile. This is a Spellcasting DC of 13 ((10(base DC) + (3 X 1(spell level)) =13). If he fails the DC, then he must now roll a Fortitude Save at the same DC as the spellcast DC (DC 13) was plus the spellcasters Fortitude Saving Throw Bonus. In this example he would need to roll a 12 or higher because of his +1 Fortitude bonus. If succeeds, the spell merely misfires and he loses the spell point(s). If he fails the Fortitude saving throw however, he must cross reference the *spell backfire chart*.

Sample Spell:

Acid Fog

Conjuration (Creation) [Acid]

Level: Sor/Wiz 6, Water 7

Spellcast DC: (10 + (3 \* 6)) = 28

Fortitude DC: 28

Spell Points Cost: 6

Spell "Alignment":Neutral

Spell Taint points: None

Sanity check: None

Spell "Broadcasting & Residue Level": 6

Components: V,S,M/DF

Casting Time: 1 standard action

Range: Medium (100 ft. + 10 ft./level)

## Eä d20 - Magic in Middle-earth Spell Use Examples in Action

.....

### Sample Spell:

#### Animate Dead

Necromancy (Evil)

Level: Clr 3, Death 3, Sor/Wiz 4

Spellcast DC: Clr/Death=19, Sor/Wiz=22

Fortitude DC: as Spellcast DC

Spell Points Cost: Clr/Death=3, Sor/Wiz=4

Spell Alignment: Evil

Spell Taint points: Clr/Death=1d3 x 3, Sor/Wiz=1d3 x 4

Sanity Check: Yes

Sanity Points Loss for failed Sanity Check: Clr/Death=1d6-1 x 3

Sor/Wiz=1d6-1 x

4

Spell Broadcasting & Residue Base Points: Clr/Death=3, Sor/Wiz=4

Components: V,S,M

....

## 14 SPELLS TABLE

Below you will find a list based on the D&D Player Handbook 3.5.

For details on the spells, simply consult the relevant book.

Each spell has the added fields of:

Spellcast DC

Spell Alignment/Taint Points

Sanity Check (yes or no)

Sanity Points Loss

Spell Broadcasting & Residue Base Points

Ages (Time Periods) Allowed

Notes (anything else that may differ from PH listing)

All other factors remain the same as in the PH listing of the spell.

This table summarizes all spells available (eventually).

Spells are listed alphabetically.

## Eä d20 - Magic in Middle-earth-14 Spells Table

Table Headings Explanation:

**Spell Name** – the actual name of the spell.

**Class/Lvl** – the appropriate classes and spell level for that class, this can cause variants in DC, Shadow, Taint, Sanity, Broadcast, & Residue points.

**School** – The type of school for the magic, for example Enchantment (Compulsion) (Mind-Affecting, Sonic).

**NAT.** - Natural/Nature spell? If Y, then likely this spell, when not used in ways that either harm nature, or greatly disrupt the Song of Arda, may have very little, or even zero broadcast/residue. The actual use of the spell can change this. If the DM determines the spell was used in a way harmful to nature or the Song of Arda, then full broadcast/residue may be imposed instead of the reduced amount.

**DC** = Base Cast DC = 10+ (3 X Spell Level).

**AI** = Spell Alignment (Affects risk of acquiring Taint Points). Examples of “evil” spells typically try to control or assail other people’s minds, subjugate free will, or are highly destructive, or involving necromancy.

**Shadow / Taint** = added points of shadow and/or taint.

**San** = Sanity Check , if indicated, then a check is to be made, if fails SAN check, then the number of points indicated are lost.

**Brdcst & Rsdue** = Spell Broadcasting & Residue Base Points.

**Age** = Ages (Time Periods) Allowed.

**Notes** = (anything else that may differ from PH listing)

**Src** = Source of this spell (book, magazine, website, etc.)

Formulas for determining spell modifiers:

Spellcast DC= (10 +(3 X Spell Level) – Spellcaster level.

Spellcast DC Failed Fortitude DC Check= Spellcast DC + Spellcasters Fortitude Bonus

Spell Points Cost= Spell Level

Spell Taint Points= 1d3 x Spell Level

Sanity Check= Yes for any Evil aligned spells

Spell Broadcasting & Residue Base Points= Spell Level (multiplied by Location Alignment Chart)

## 15 DEITIES OF EÄ OVERVIEW

The Deities (and Demigods) of Eä and Middle-earth are detailed in the separate book, Eä d20 Deities of Eä (Eru, Valar, and Maiar). However, it is useful for “Divine” casters to have a summary of the deities here, and their related “domains”. So a short summary of each is provided here. You will have to consult the Deities of Eä book for far more details than this brief list.

The greatest deity in Eä is Eru Illuvatar (The One). There is no other on the same level of power as he, and no other can truly threaten Eru's will, but some (Melkor) attempt to thwart the plans of Eru in the material world.

The “rankings” of deity types are as such:

### 15.1 EÄ DEITIES AND DOMAIN LISTS

### 15.1.1 THE GREATER POWERS (ARATAR)

#### 15.1.1.1 MANWE
